

## Your solution to the CCR Enterprise Initiative

### What are the challenges of the CCR Enterprise Initiative?

Under Pennsylvania's Department of Public Welfare (DPW) Consolidated Community Reporting (CCR) Enterprise Initiative, counties must report person-level encounter data in the 837 format to the state claims management system (PROMISe™). This presents significant hurdles:

- 837 transactions are much more complex than previous CCR file layouts.
- Counties possess limited resources for handling increased data reporting demands.
- State requirements change frequently.
- HealthChoices BH-MCOs struggle to get 837 transactions to pass complex and idiosyncratic PROMISe™ edits.

### ACA is ready to help— ACA Service Bureau

The ACA Service Bureau model assists county human services organizations in regulatory compliance and reporting. **Counties can use their existing data collection technology** while ACA validates the data, cross-references it, and formats it to comply with requirements. The ACA Service Bureau can handle information exchange through reports, data files, or any other mechanisms your county uses for CCR submissions and any other purpose.

The ACA Service Bureau helps counties make data corrections, creates the file in the required 837 format, and interprets PROMISe™ edits. Instead of navigating the complexities of 837 transactions and DPW edit-checks, **counties can simply give ACA the data in a format with which they are comfortable.**

ACA consistently submits complete, accurate data to regulatory entities. ACA understands potential regulatory submission changes, especially those regarding Pennsylvania public welfare, and **ACA can typically address changes without your county's assistance.**

Your county can utilize ACA's Service Bureau with **no up-front investment** on a pay-per-use basis.

### ACA is ready to help—MASTRR™ CCR

ACA's MASTRR™ CCR application is the solution for counties whose information systems cannot collect the required information. MASTRR™ CCR is a **low-cost, yet feature-rich** application that maintains mental health information. Among its many features, it is **user-friendly** and maintains a range of information:

#### MASTRR™ CCR Distinguishing Features

**Claims/Invoices** – Limits selections and uses defaults based on contracts, assessments, and other system information. **Automatically creates adjustments** and voids as necessary when information is updated, such as the paid amount.

**Contracts** – Easily rolls contracts forward to the next fiscal year.

**Consumer demographics** – Requires only basic information that is mandatory for state submissions or that counties typically collect.

**Services** – Allows users to work in a meaningful internal taxonomy while using the required external codes for state reporting.

**Consumer cases** – Ensures that invoice service dates fall within active date spans.

**Providers** – Associates multiple identifiers (i.e. MPI and NPI) with each provider, eliminating duplicate records and the need for double entry.

**Alternative payment arrangements** – Collects current state-required information and will accommodate proposed changes when they are finalized.

MASTRR™ CCR also offers comprehensive reporting and works with the ACA Service Bureau and our other products and services.

## About ACA

ACA is a professional business committed to assisting organizations that administer public welfare services. ACA helps human services agencies accomplish their goals in a coordinated, administratively efficient, accountable, and cost-effective manner without compromising the quality of care.

ACA has an established track record of meeting complex health data-related requirements on time and has extensive project management experience in many diverse municipal health information projects.

Respecting the uniqueness of every person is the foundation of our company. Whether that person is a staff member, customer, or recipient of services, we respect the person's right not to be treated differently. With this as our corporate philosophy, we are pleased to offer our services to help deliver quality care to individuals, families, and communities.

## ACA services

ACA provides exceptional consulting and information technology solutions to our partners in county human services agencies. Our intimate knowledge of human services systems, service delivery issues, and administrative and fiscal implications of care management has enabled us to assist our customers in managing their programs while they remain focused on improving the quality of life for consumers and their families.

We offer our clients expertise in two primary areas. The first is our **understanding of the administration and delivery of public health and human services**. The second area is our **technical competence** in addressing the information processing requirements of our customers as they deliver and coordinate care.

Our consulting services coupled with our **MASTR™ Solutions software** can uniquely satisfy the needs of the full range of human services activities, including their programmatic, compliance, administrative, fiscal, and analytic aspects.

We advocate **local controls and integrated management** of public care delivery systems. Locally and internationally, ACA contributes consulting services and assistance to community integration projects.
